NATURAL DOG CHEWS – DRIED PORK STOMACHS

Composition: pork stomach 100%. **Analytical constituents:** crude protein – 62%, crude fat – 20%, moisture – 8%.

Pork stomachs are a tasty and flavoursome snack for dogs of all ages. They are a valuable source of fat also rich in soluble vitamins. These treats are not only a valuable addition to a protein-rich diet with an amino acid composition, but also contain a lot of vitamins. The most important of these are: B12, B6, folic acid and the minerals iron, zinc, phosphorus and copper. Which are important for many bodily functions, including the nervous and haematopoietic systems, and to ensure that all cells are built properly. Collagen, which as a structural protein plays an important role in maintaining the structure of skin, bones, tendons and other connective tissues, is an important component of pork stomachs. Dried pork stomachs are great as a form of reward, chew and snack. Thanks to thermal treatment - drying at low temperatures, they are a completely safe chew suitable for everyday use.

The product does not contain any preservatives or substances that improve taste and smell.

NATURAL DOG CHEWS – DRIED BEEF HEART

Composition: beef heart 100%. **Analytical constituents:** crude protein – 70%, crude fat – 12%, moisture – 8%.

Dried beef hearts are a natural delicacy with exceptional taste and aroma rich in valuable nutrients. Beef heart provides important health vitamins, including: vitamin B12, B6, niacin, folic acid and minerals such as: iron, zinc, phosphorus and selenium. Particularly important is zinc, which plays an important role in the functioning of the immune system, wound healing, DNA synthesis and many other physiological processes. Worth noting is the high protein content of dried beef hearts, which have a diverse amino acid profile. L-carnitine, contained in beef heart, aids the transport of fatty acids to the mitochondria, where they are oxidised and converted into energy for the entire body. Thanks to thermal processing, i.e. drying at low temperatures, beef hearts are a safe snack for dogs of all ages and are suitable for everyday use.

Dried beef hearts do not contain any preservatives or substances that improve taste and smell.

NATURAL TREATS

weight: 40 g

NATURAL DOG CHEWS – DRIED COD SKIN

Composition: cod skin 100%. **Analytical constituents:** crude protein – 68%, crude fat – 3%, moisture – 8%.

As well as satisfying the need to chew, cod skin provides dogs with a range of valuable nutrients. Among these, proteins with an exceptionally valuable amino acid composition, mainly in methionine and cysteine, and fatty acids of the n-3 family play a key role. The sum of protein and fatty acids primarily affects heart and brain function. Dried cod skin provides vitamins: D, B12, A and E and minerals such as iodine, phosphorus, potassium and sodium. As with other animal skins, cod skin contains collagen, a structural protein important for maintaining the elasticity of skin, tendons and other connective tissue structures. The collagen present in cod skin is highly digestible. Thanks to the thermal treatment process, i.e. drying at a low temperatures, cod skin is a completely safe chew suitable for everyday use. The product does not contain any preservatives or substances that improve taste and smell.
